Activity #6 Security Policies and Precedures
March 11, 2026

Task 1: Drafting an Acceptable Use Policy (AUP)

Effective Date: March 2026
Approved by: IT Security Department
Organization: Vertex Innovations

1. Purpose
This policy sets the rules for using Vertex Innovations' systems, devices, and network. All employees must read and follow this policy as part of their employment.

2. Personal Use
Employees must use company devices and the internet mostly for work purposes. Personal use is allowed only during break time, from 12:00 PM to 1:00 PM and after 5:00 PM. Personal use must not affect work performance or use too much of the company's internet bandwidth.

3. Social Media
Employees must not post or speak on behalf of Vertex Innovations on their personal social media without written approval from the Communications department. Employees must not share any confidential company information, client details, or internal projects on any personal platform. Breaking this rule will lead to disciplinary action.

4. Hardware Care and Responsibility
Employees are responsible for all company devices given to them. If a device is lost or stolen, it must be reported to the IT Security department within one hour. Employees must not plug in unauthorized USB drives or personal devices into company equipment. If a device is damaged or lost due to negligence, the employee may be required to cover the replacement cost.

5. Incident Reporting
If an employee sees anything suspicious, such as unauthorized access, phishing emails, or unattended devices, they must report it immediately to the IT Security team at security@vertexinnovations.com or by calling extension 5555. Employees must not try to investigate the incident on their own.

Enforcement
Employees who violate this policy will face disciplinary action, which can include termination or legal action, depending on the situation.

Task 2: Translating Policy to Procedure:

Configure Account Policies

Configure Account Lockout (Defense against Brute Force):

Task 3: Standard Operating Procedure (SOP)

The following checklist must be completed by IT and HR every time an employee leaves the company.

Step	Category	Actions	Responsible
1	Physical Assets	Collect laptop, phone, badge, and access cards on the last day	IT + HR
2	Physical Assets	Record all returned hardware in the asset management system	IT
3	Digital Access	Disable the employee's Active Directory account right away	IT
4	Digital Access	Remove VPN access and remote login credentials	IT
5	Digital Access	Disable the company email and forward it to the manager for 30 days	IT
6	Digital Access	Remove access to all tools like Slack, GitHub, and Google Workspace	IT
7	Knowledge Transfer	Employees must hand over project files and documents before their last day	Manager
8	Knowledge Transfer	Transfer ownership of company files and accounts to the right people	IT + Manager
9	Audit	Check the last 30 days of file downloads and access logs	IT Security
10	Audit	Look for unusual activity like bulk downloads or email forwarding	IT Security
11	Sign-off	HR confirms all steps are done and signs off on the offboarding form	HR

Task 4: Compliance Spot Check

Which Offboarding SOP Steps Failed?

Steps 3 and 4 failed because Alice's Active Directory account and VPN access were never disabled. This allowed her to log in from home even after she had already left the office. Step 1 also failed because no one collected her laptop. She just left it on her desk without any IT sign-off. Steps 9 and 10 also did not happen because the offboarding process was never started in the first place. If monitoring was active, her login after leaving would have been flagged right away.

Which AUP section was violated?

Section 4 was violated because Alice left the company laptop on her desk without reporting it to IT. The manager also failed to initiate the offboarding process, which violates the policy's Enforcement clause.

How would Task 2 settings have helped?

If Alice tried to guess her manager's password to get more access, the Account Lockout Policy would have stopped her after 5 wrong attempts and locked the account for 30 minutes. This makes brute force attacks much harder. On top of that, the 12-character password requirement with complexity rules makes it harder to guess the password.
